

EXPERIMENT 30: CREATE A WEB BLOG USING WORDPRESS

Aim

To create a Web Blog using WordPress and demonstrate the use of Title Tag, Anchor Tag, Heading Tags, Paragraph Tag, Image Tag, and other basic HTML elements.

Objective

- To create and customize a blog using WordPress.
- To understand the basic structure of a web page.
- To demonstrate the use of HTML tags in a WordPress post.
- To create hyperlinks using the **Anchor (<a>) tag**.
- To use the **Title (<title>) tag** and different heading tags.
- To design a simple and informative blog page.

Algorithm / Procedure

1. Start.
2. Install and open **WordPress**.
3. Create a new website/blog.
4. Open **Dashboard** → **Posts** → **Add New**.
5. Enter the blog title.
6. Add headings, paragraphs and images.
7. Add hyperlinks using the Anchor tag.
8. Add a suitable page title.
9. Format the content using headings and lists.
10. Preview the blog.
11. Publish the blog.
12. Verify that the links and content work correctly.
13. Stop.

Sample HTML Code

This code can be added using a **Custom HTML block** in a WordPress post:

```
<!DOCTYPE html>

<html>

<head>
  <title>My Technology Blog</title>
</head>

<body>

  <h1>My Technology Blog</h1>

  <h2>Introduction</h2>

  <p>
    Welcome to my technology blog. This blog contains
    information about modern technologies and web development.
  </p>

  <h2>Useful Links</h2>

  <p>
    Visit
    <a href="https://www.wordpress.org">
      WordPress
    </a>
    to learn more about website creation.
```

</p>

<h2>Web Development</h2>

<p>

HTML, CSS and JavaScript are important technologies
used for developing websites.

</p>

<h3>Important Technologies</h3>

HTML

CSS

JavaScript

WordPress

<p>

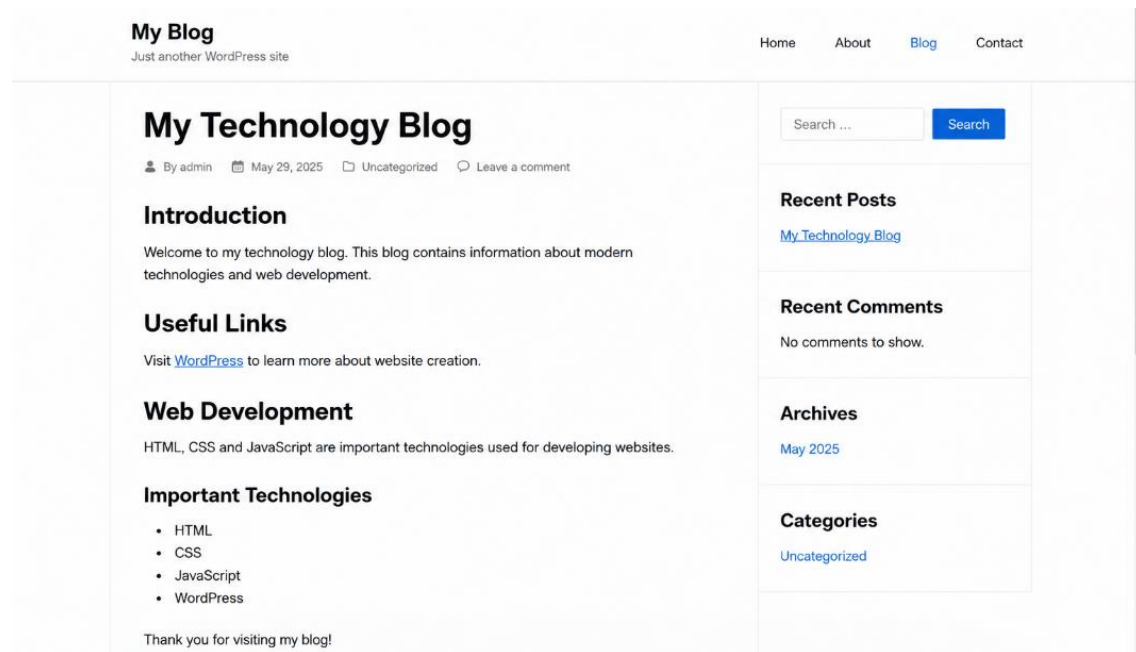

Thank you for visiting my blog!

</p>

</body>

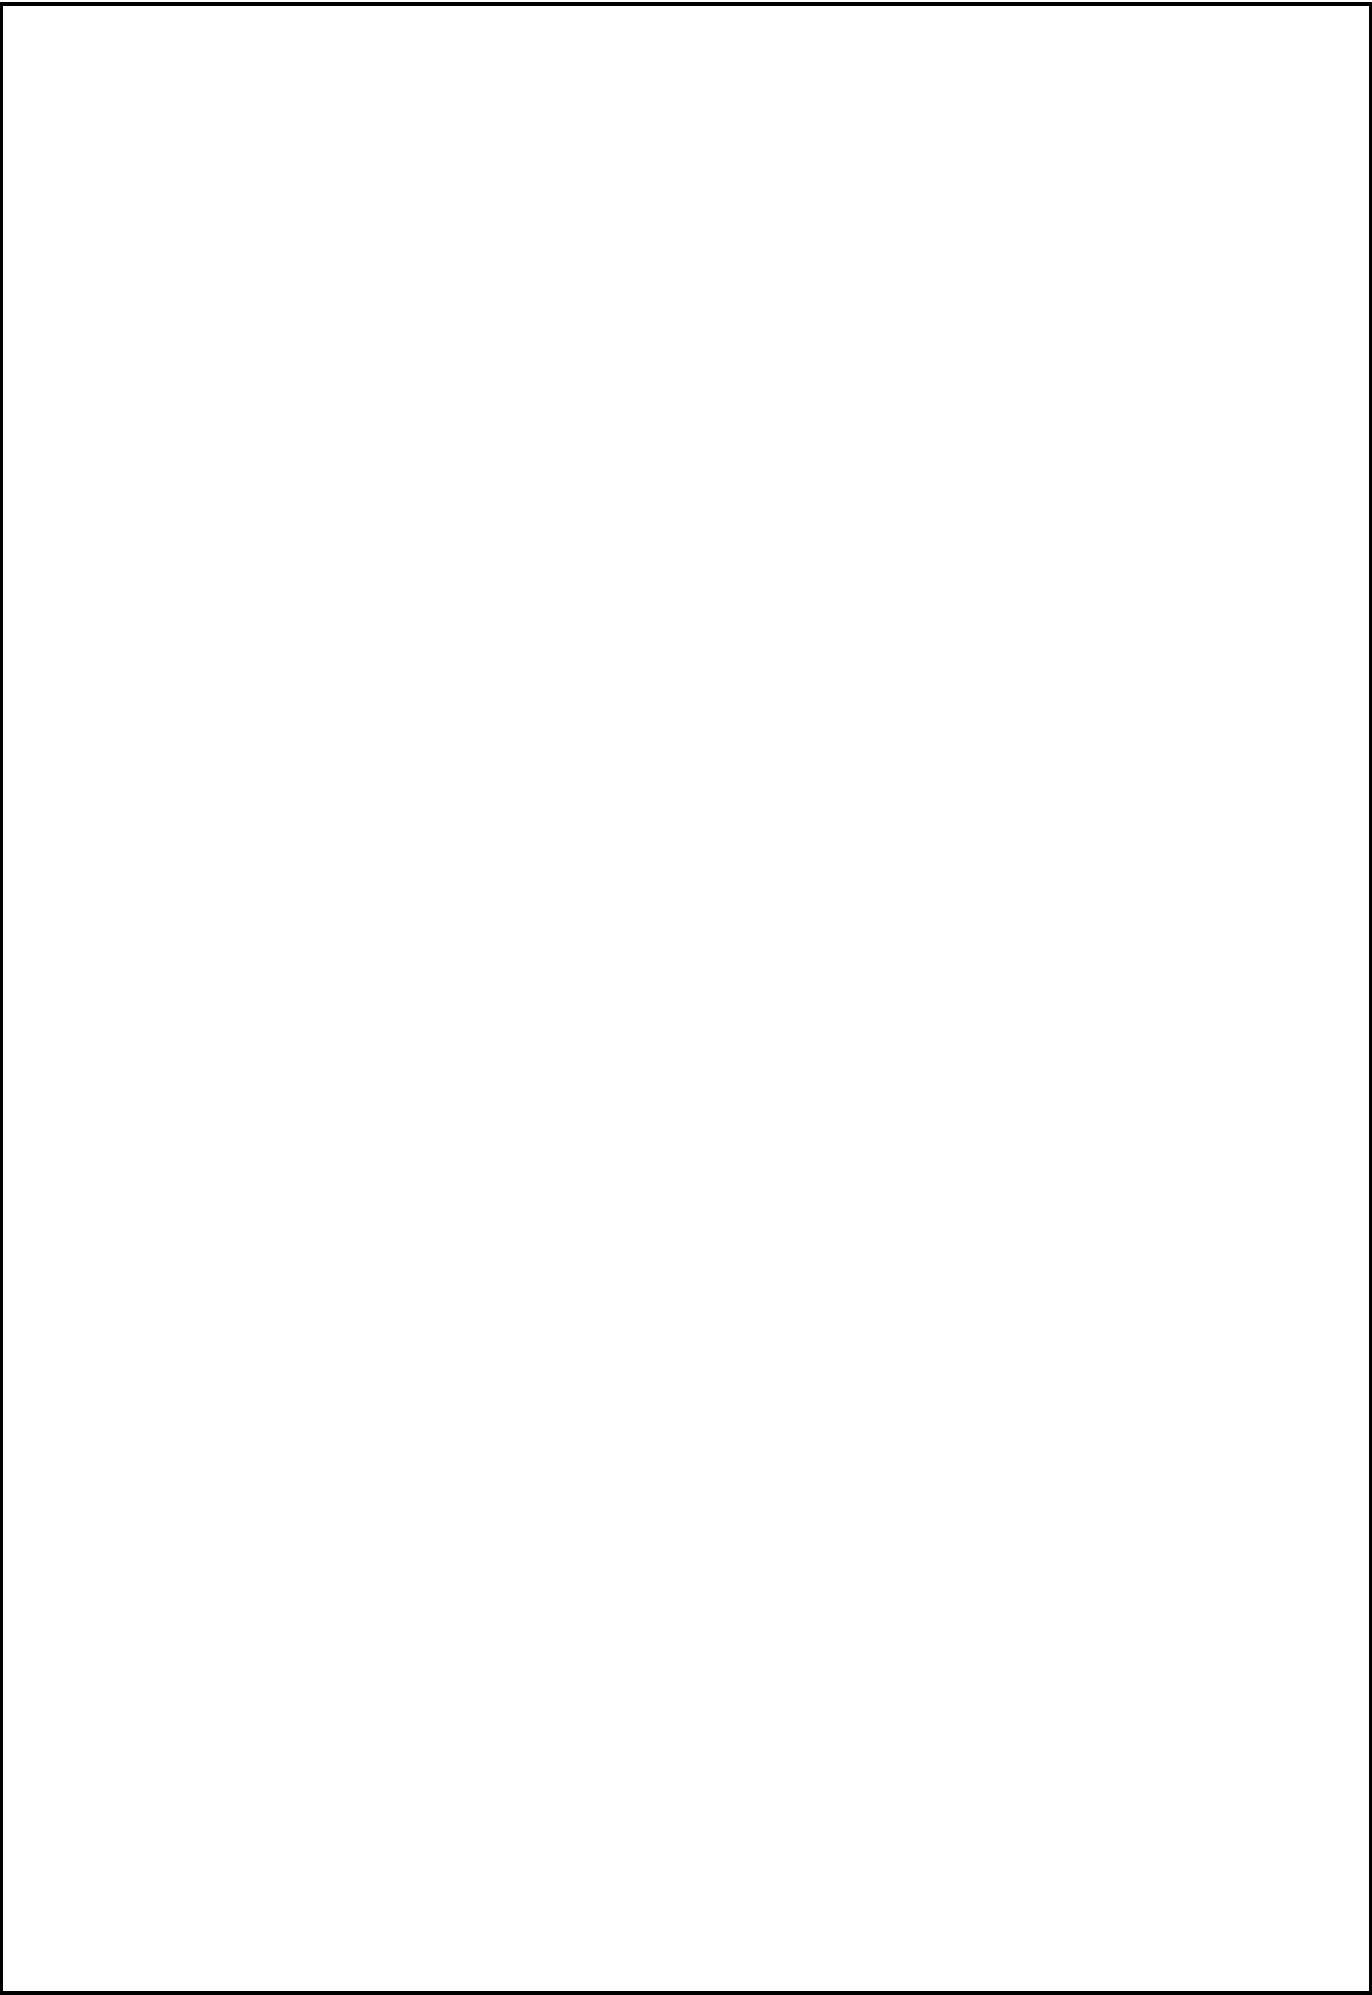

</html>

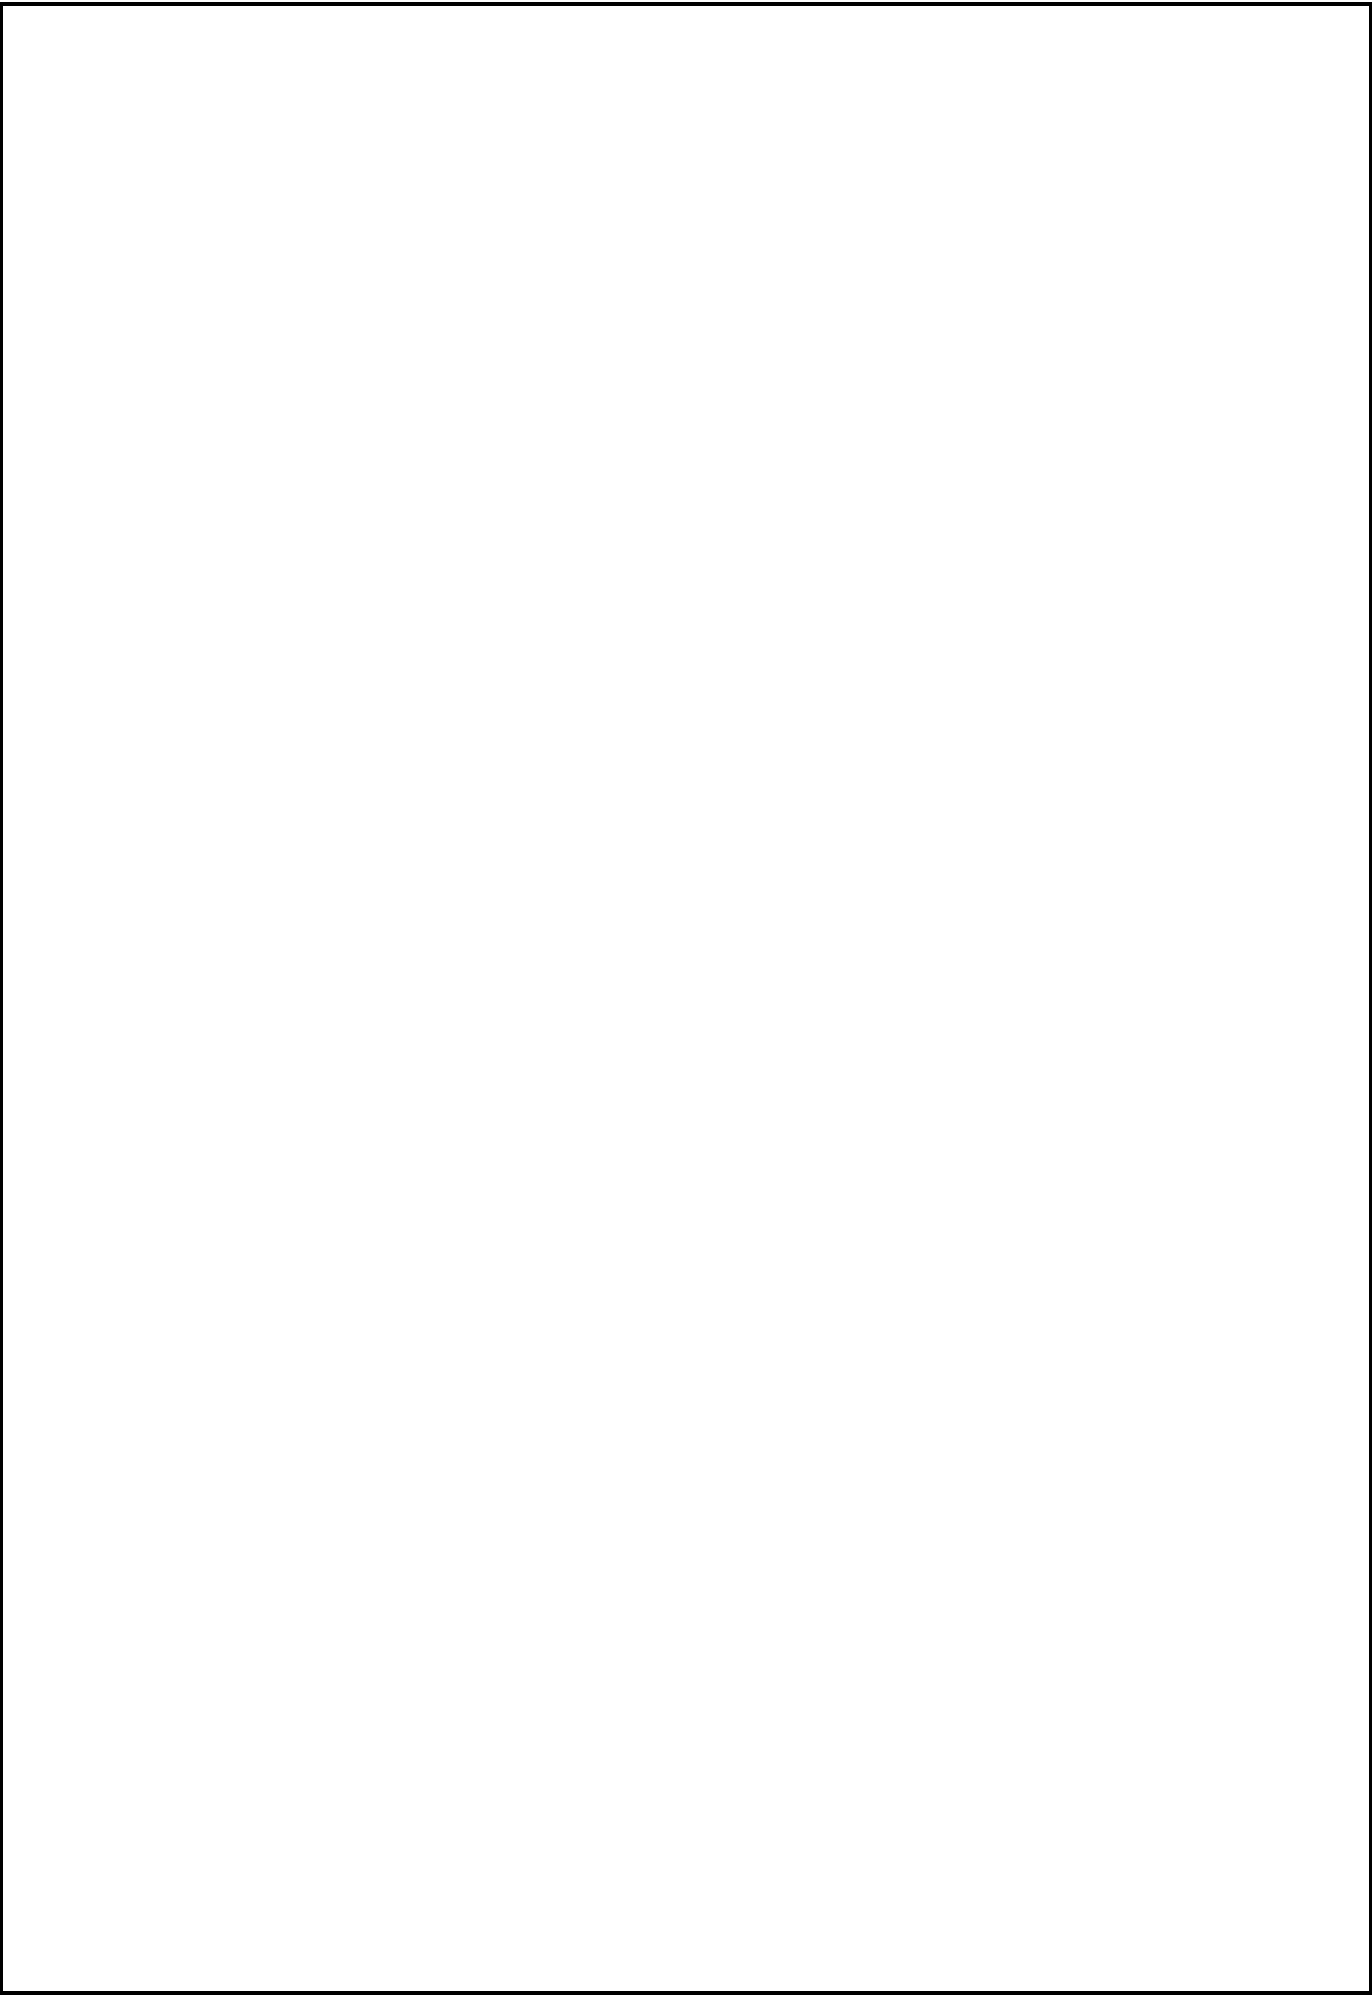

Output

Result

The WordPress Web Blog was successfully created. The blog demonstrates the use of the Title Tag, Heading Tags, Paragraph Tag, Anchor Tag, and List Tags, and the hyperlinks work correctly.
